

Permanent ultrasonic flow meter

# FLUXUS® WD

Non-invasive Water Flow and Temperature Monitoring

Outstanding low flow accuracy  
down to 0.01 m/s

Temperature measurement  
accuracy of  $\pm 0.2$  K

Minimal installation costs and  
zero pipe interference

Permanently drift-free and  
no zero calibration needed

Temperature compensated  
transducers

IP68 transducers

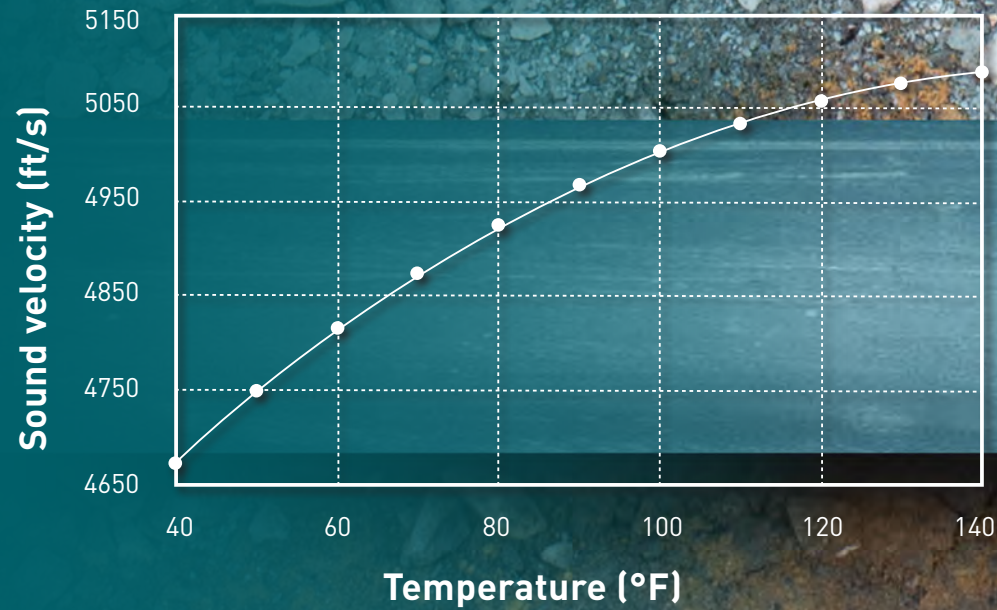

Permanent maintenance-free  
coupling pads

Transducers can be buried  
(no chamber required)

**FLEXIM Sets Standards**  
when measuring matters

## Drift-free flow measurement

There is no method of zero drift correction for our instruments – because they just don't drift. This also applies to the WD Series that is **installed without zero calibration** and **remains drift-free, permanently**. FLEXIM is the only company that accomplishes this, thanks to its unique combination of matched piezo-transducers and advanced factory calibration.

## Outstanding low flow accuracy

The WD Series belongs to the most reliable and accurate ultrasonic clamp-on systems. Furthermore, it **measures flow rates as low as 0.03 ft/s**. The inaccuracy of other meter technologies can increase so dramatically in the low flow range, that they are unsuitable for monitoring minimum night flows. But for water suppliers the **precise monitoring of minimum night flows** is an essential part of their leakage detection activities – and the WD Series is the ideal tool for this task.

## Non-invasive temperature measurement

Bacterial growth increases in drinking water networks with increasing temperatures. Especially in parts of the network where flow velocities are low, leading to longer residence times, higher water temperatures represent a hygienic risk. The **technology leader FLEXIM** is the first to offer a precise **non-invasive temperature measurement** based on ultrasound technology. Now water suppliers can monitor volume flow, velocity, and temperature with one device.

Flow velocity	0.03 ft/s
Temperature	54,3 °F
Flow rate	9.81 gpm

## Low installation costs

When creating a new flow measurement point the main costs are not incurred by the instrument but by the installation work (supply interruption, pipe cutting, pipe flushing, etc.). These costs are significantly reduced using the **clamp-on technology** of the WD Series that does not require any work that affects the integrity of the pipe. This enables a **very simple and cost-effective** installation of further flow measurement points within an existing water supply network.

## Built to last

The WD Series comes with the **most robust mounting system** on the market. The transducers are fixed to the pipe with broad stainless steel straps and secured in robust stainless steel housings. The transducers themselves have **IP68 protection** and reinforced transducer cables. They are connected to the pipe with **permanent coupling pads, instead of coupling gel** that can deteriorate or be washed away. All this ensures the durability of the system and makes it **suitable for both installations in chambers and buried installations**.

## Works on difficult pipes

The WD Series is available with different transducer types and is suitable for inner diameters ranging from 1...255 inches. The strong signal output and noise suppression technology make it possible to **use the WD Series on all pipe materials**, even on such challenging ones as fiber-reinforced plastic (FRP) pipes. The **outstanding performance** of FLEXIM is shown by thousands of references worldwide. Contact your local FLEXIM support office for more details.

# FLEXIM

## More than 30 years of experience

### Advanced Meter Verification

Advanced Meter Verification (AMV) allows you to check the health of your FLUXUS® flowmeter in depth directly on site without the need of process interruption.

### Technical Data

	F721 WD	F532 WD
Number of measuring channels	1 or 2	1
Transducer for pipe sizes range	2 ... 255 inches	1 ... 79 inches
Volumetric flow rate uncertainty	$\pm 1\%$ MV $\pm 0.02$ ft/s	
Volumetric flow rate repeatability	$0.15\%$ MV $\pm 0.02$ ft/s	
Temperature reading uncertainty	$\pm 0.2$ K (fluid temperature: 32 to 86 °F)	
Power supply	100 ... 230 VAC or 20 ... 32 VDC or 11 ... 16 VDC	90 ... 250 VAC or 11 ... 32 VDC
Transducer degree of protection	IP68 or IP67	
Transducer for temperature range	-40 to +266 °F	
Outputs	4 - 20 mA active / passive 4 - 20 mA HART active / passive pulse / binary	
Digital communication	Modbus RTU/TCP, BACnet MSTP/IP M-Bus, Profibus PA, Foundation Fieldbus	Modbus RTU/TCP, BACnet MSTP/IP M-Bus
