The World’s Only Clamp-On Steam Meter

FLUXUS® ST

Non-Invasive – High Turndown – Accurate

Technical Specifications

**FLUXUS** ST
Portable or stationary clamp-on ultrasonic steam flow measurement system

**Media**
Dry saturated and overheated steam

**Measurement quantities**
Volume flow, mass flow, flow velocity

**Temperature**
max. 365 °F non-Ex
max. 329 °F FM Class I Div. 2

**Pressure**
min. 44 psi abs

**Pipe sizes**
0.9 – 39.4 inch *

**Flow velocities**
0.03 ft/s to 196 ft/s **

**Measurement uncertainty** (Volumetric flow rate)
±1...3% of reading ±0.02 ft/s, depending on application

**Calibration**
In-house calibration traceable to NIST Standards

**Hazardous area protection**
FLUXUS® G722 ST-LT: FM Class I Div. 2
FLUXUS® G831 ST-LT: ATEX, IECEx Zone 1

* Please have your specific application tested for feasibility.
** This is especially recommended for pipe diameters smaller 2.5 inch.

For more detailed information please download the Technical Specifications here: www.flexim.com.
Because of its obvious advantages, clamp-on ultrasonic measurement has become a standard technology in all branches of industry and innumerable applications, be it for the flow measurement of liquids or gases. No wonder that many customers asked: „What about steam?“ However, gaseous water seemed to remain the ultimate challenge. Up until now.

With FLUXUS® ST, clamp-on steam measurement is now available for the very first time – as FLEXIM continues to push the boundaries and to set the standards.

Non-invasive and efficient
FLUXUS® ST measures steam flow non-invasively from the outside of the pipe. Non-invasive steam flow measurement means measuring without any interruption of operation and supply. Since clamp-on ultrasonic transducers are simply mounted on the outside of the pipe, it requires just minimal installation effort and no opening of the pipeline.

The acoustic measuring method proves to be impressive with its exceptionally high measuring dynamics, is highly sensitive even at very low flow velocities and functions independently of the flow direction. Due to this large flow range (flow velocities from 0.03 ft/s up to 196 ft/s), there is no need to reduce pipe diameter to fit an inline meter’s requirement of minimum flow velocity. Moreover, the non-invasive measurement does not cause any pressure loss. The transducer mountings can be completely insulated to reduce any heat loss to the environment.

With FLEXIM’s FLUXUS® ST, for the first time ever, it is possible to capture all steam usage from very low to very high flow rates with one meter size.

Complete maintenance-free
Non-invasive steam flow measurement also means measuring without direct contact with the medium flowing in the pipe. FLUXUS® ST has no moving parts. Its ultrasonic transducers are fixed to the pipe with broad stainless steel straps and secured in robust stainless steel housings. They are connected to the pipe with permanent coupling pads, instead of coupling gel that can deteriorate or be washed away. Therefore, FLUXUS® ST is not subjected to wear and tear and does not require any maintenance.

Fixed and flexible
FLUXUS® ST measures volume and mass flow of saturated and superheated steam at temperatures up to 365 °F. The clamp-on ultrasound system is available as both a stationary and a portable meter:

FLUXUS® G722 ST-LT is the stationary flow meter for steam and offers a variety of digital communication interfaces such as Profibus, Modbus RTU, TCP and others.

With the new portable FLUXUS® G601 ST, FLEXIM offers a veritable multi-tool for maintenance and energy managers: in addition to steam, the measuring system can also measure liquids, gases, compressed air and heat.

For use in hazardous areas, the FLUXUS® G722 ST-LT is available as FM Class I Div. 2 certified transmitter. The FLUXUS® G831 ST-LT is a dedicated steam meter for ATEX / IECEx Zone 1.
Innovation on demand
